

## ZBS 桥楼航行值班报警系统 Bridge Navigational Watch Alarm System (BNWAS)

### ▶ 概述

#### Overview

ZBS型桥楼航行值班报警系统(BNWAS)用于监测桥楼人员活动，预防因操作者失去工作能力而引发事故。该系统监测值班驾驶员(OOW)的工作状态，当OOW失去履行其职责的能力时，将自动向船长或其他有能力的OOW报警。该系统首先是向OOW提出警告，如果没有得到应答，则将向船长或另一位有能力的OOW报警。此外，BNWAS还具有OOW即时求助的呼叫功能。

ZBS Bridge Navigational Watch Alarm System (BNWAS) is designed to monitor personnel activities at the bridge and prevent accidents caused by operator incapacity. The system monitors the awareness of officers on watch (OOW); if the OOWs lose the ability to perform their duties due to any reason, the system will automatically send alarm to the captain or other capable OOW members. The system firstly warns the OOW, and if there is no reply, it will alarm to the captain or another capable OOW member. In addition, the BNWAS may also be provided with the calling functions for OOW's immediate help.
